

Compact size

Mounts anywhere

Heavy duty construction

Manual sliding valves control air flow

Remote operation ensures operator safety

Modular design for quick, easy installation

Expands torque range of pneumatic brakes

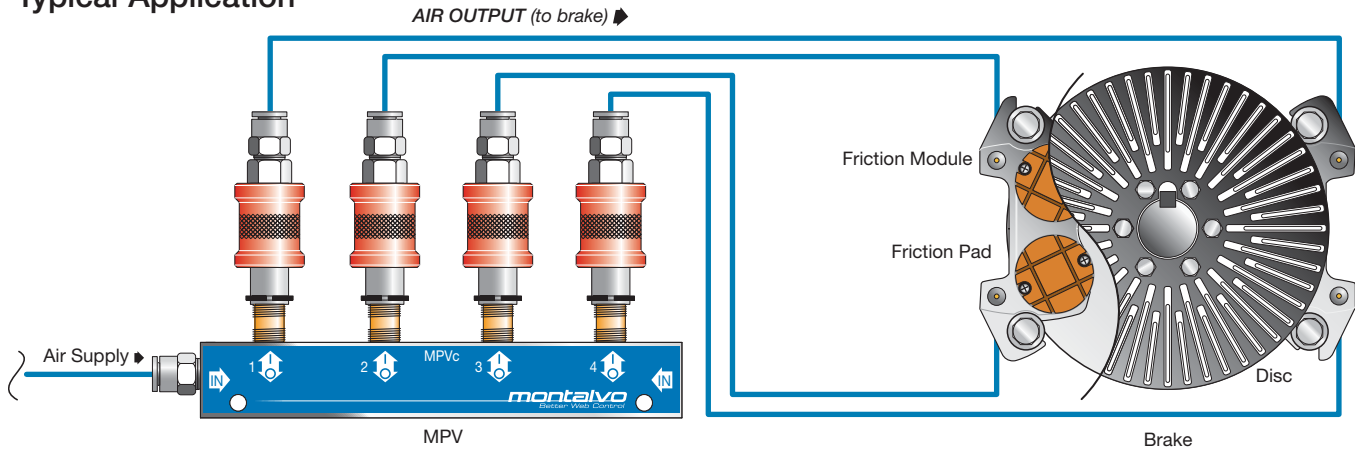

Montalvo Accessories

MPV Heavy Duty Push Valve Assembly

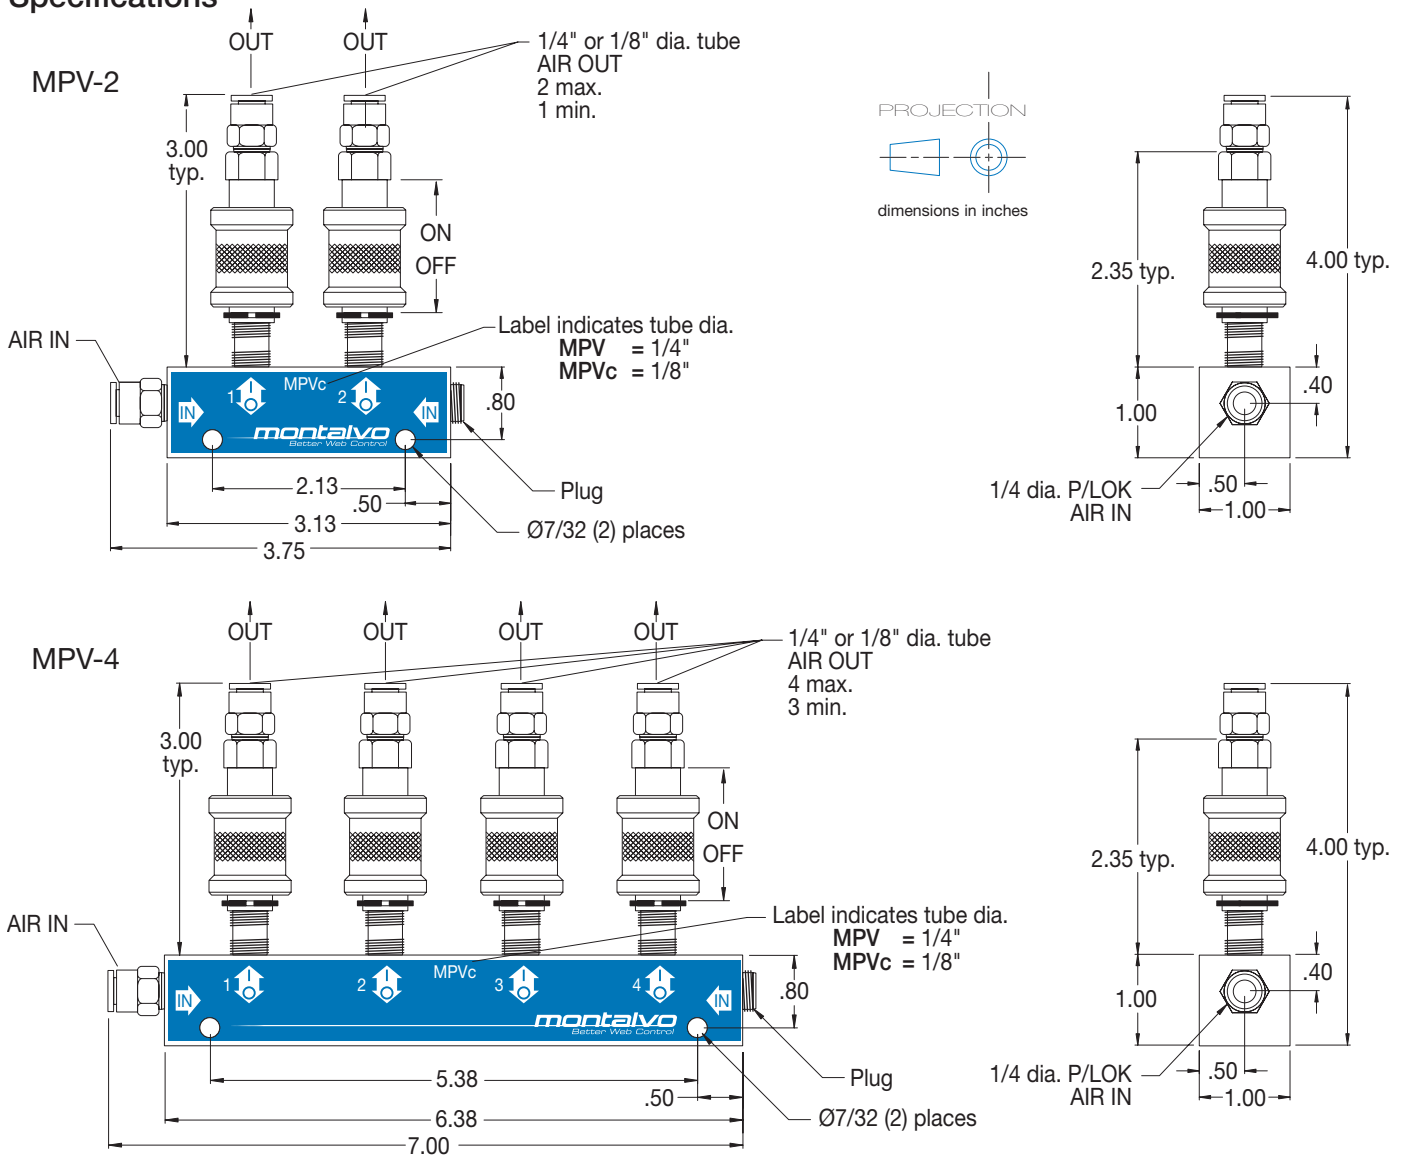

The Montalvo MPV allows direct remote control of brake cylinder operation. Brake cylinder modules can be controlled simultaneously through one unit. Brake operators can turn cylinders on and off from their control panels and thereby set brakes to run at different torques. Adjustments can be made remotely, relieving the operator of the task of removing the brake guard in a hazardous environment.
